

NurseLink

NurseLink is a mobile and web app that helps families connect with **real, trusted nurses** for care at home. Instead of calling many people and not knowing if they are safe, NurseLink makes it easy:

- You open the app, choose what care you need, and book a nurse.
- The nurses are all **verified, licensed, and safe**.
- It is like booking a cab, but instead of a driver, a **professional nurse** comes to help you at home.

Many families face problems with unorganized services — like fake nurses, unsafe care, or high hidden costs. NurseLink is different because:

- It **only allows licensed nurses** (not just any caregiver).
- It has a **7-step safety check** before a nurse can join.
- Prices are **fixed and shown clearly** in the app.
- It works **anytime, day or night**.

So, you don't need to worry about trust or cost.

NurseLink is for **any family member** who needs medical care at home, such as:

- A new mother after delivery.
- An elderly parent needing regular care.
- A child with fever or rash.
- A patient who just came home from the hospital.

Basically, it is for anyone who needs a nurse, but doesn't want to go to the hospital for small care needs.

NurseLink was created because many families in India were struggling with:

- Finding safe nurses in a very unorganized market.
- Paying **high and unpredictable charges**.
- Managing care alone without professional support.

The idea was to make a platform where **families feel safe and supported** — knowing that every nurse is checked, affordable, and available instantly.

NurseLink has nurses trained for many situations:

- **Post-pregnancy care:** To help new mothers with recovery, breastfeeding, and newborn care.
- **Elderly care:** To help older people with medicines, mobility, and daily health checks.
- **Children's care:** For quick advice when kids have common health problems.
- **Post-surgery care:** For patients at home after an operation (e.g., wound dressing, medication).
- **Pregnancy sessions:** To answer expecting mothers' questions about diet, safety, and delivery preparation.

Yes! NurseLink has **postpartum nurses** who can:

- Guide you on breastfeeding.
- Support your recovery after childbirth.
- Help you take care of your newborn's health.

This support helps mothers feel confident and less stressed.

Parents can book a pediatric care nurse for:

- Minor health issues like fever, cough, or rash.
- Guidance on vaccination schedules.
- Advice when parents feel worried late at night.

Yes, nurses can visit patients recovering at home to:

- Dress wounds properly.
- Manage medicines.
- Look for signs of infection.
- Give guidance on recovery exercises.

This reduces the chance of returning to the hospital.

All nurses on NurseLink are **licensed healthcare professionals**. They are not general caregivers. Each nurse must show:

- A valid nursing license.
- Educational certificates.
- Police clearance.
- Past work experience.

Only after all checks do they get the **Verified Badge**.

A nurse is a **licensed medical professional**. They can give medicines, injections, and handle medical tasks. A caregiver is not a nurse — they only help with daily activities like bathing, walking, or eating.

NurseLink **only provides nurses**, not caregivers, to ensure safety.

Booking is very simple:

1. Open the NurseLink app or website.
2. Choose what kind of care you need (like elderly care).
3. Look at the available nurse profiles.
4. Select the nurse and book your date and time.
5. Pay securely online.
6. Get instant confirmation.

You can rebook your preferred nurse, as long as they are available in the app.

You can book a nurse for your parents, children, or any family member.

NurseLink is open **24 hours, 7 days a week**. If you have an emergency at 2 AM, you can still book instantly.

NurseLink has started in a few cities and is expanding to big metros like Delhi, Mumbai, Bengaluru, and Chennai. Later, it will expand across India.

All user and health data is encrypted and stored securely in India. Only authorized nurses can access it when needed.

AI helps in two main ways:

- **Verification:** It checks IDs, licenses, and matches nurse photos to confirm identity.
- **Matching:** It helps suggest the best nurse for a patient based on skills, location, and availability.

A nurse is a **licensed medical professional**. They can give medicines, injections, and handle medical tasks. A caregiver is not a nurse — they only help with daily activities like bathing, walking, or eating.

NurseLink **only provides nurses**, not caregivers, to ensure safety.

- AI-based nurse recommendations based on patient needs.
- Video consultation for quick medical advice.
- Subscription plans for long-term home care.
- Integration with hospitals and clinics for wider reach.
- Smart IoT integration for patient monitoring at home.

Yes, you can book a nurse for your parents, children, or any family member.

Because local agents may send unverified people, charge extra, or hide costs. NurseLink is transparent, ethical, and safe — with strict verification.

NurseLink compares to traditional nurse agencies in the following ways-

- ❓ Traditional agencies are offline and slow in response.
- ❓ NurseLink is digital, fast, and available 24/7.
- ❓ Agencies often lack transparent pricing, NurseLink ensures it.
- ❓ Verification in agencies is weaker compared to NurseLink's digital checks.
- ❓ NurseLink provides a modern, tech-driven experience.

NurseLink can scale in the future-

- Expanding to multiple cities and states.
- Partnering with hospitals for referrals.
- Adding more nurse categories (ICU-trained, physiotherapists, etc.).
- International expansion in countries with similar problems.
- Building trust with continuous quality service.

NurseLink is affordable compared to alternatives in the following ways-

- ☐ Offers transparent, pre-decided pricing.
- ☐ Avoids middlemen commissions from agencies.
- ☐ Provides multiple flexible packages.
- ☐ Reduces hospital stay costs by offering at-home care.
- ☐ Saves travel and time expenses for patients.

NurseLink improves patient experience in the following ways-

- Provides quick access to skilled nurses.
- Reduces stress of finding caregivers.
- Offers transparent costs, no surprises.
- Patients can check nurse ratings before booking.
- Safe and reliable home healthcare improves trust.

NurseLink benefits Nurses in the following ways-

- ☐ Nurses get a platform to reach more patients.
- ☐ Flexible work schedule and location-based jobs.
- ☐ Verified system builds trust and credibility.
- ☐ Ratings and reviews enhance professional reputation.
- ☐ Steady income opportunities through digital bookings.

NurseLink uses the following feedback system-

- ☐ Patients can rate nurses after service.
- ☐ Written reviews are displayed on profiles.
- ☐ Feedback helps other patients choose better.
- ☐ Negative reviews are investigated for quality control.
- ☐ Ensures continuous improvement of services.

Future features that can be added to NurseLink are-

- ☐ Video consultations with doctors/nurses.
- ☐ Integration with IoT devices for remote monitoring.
- ☐ AI-based health risk prediction.
- ☐ Multi-language support for wider accessibility.
- ☐ Expansion into rural areas with limited healthcare access.

NurseLink generates revenue in the following ways-

- Commission on each nurse booking.
- Subscription packages for long-term care.
- Premium plans for faster booking and emergency access.
- Partnerships with hospitals and clinics.
- Advertising space for medical equipment/services.
